

“Pro-actively detect problems”

Mobile messaging is critical for today’s way of doing business. From the CEO to the Systems Administrator — everybody relies on it.

Don’t let infrastructure problems surprise you! OpsLogix’ intelligent management pack for BlackBerry puts you in control.

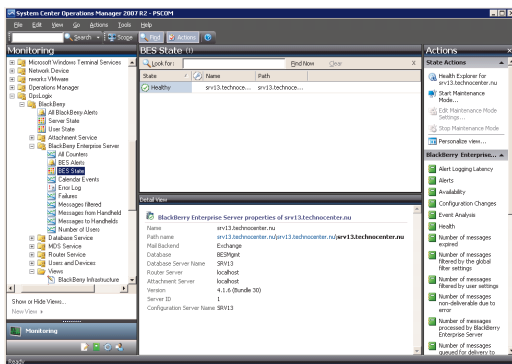

* Live visualization requires the OpsLogix IMP for BlackBerry, Professional edition

BlackBerry Monitoring

BlackBerry Monitoring

Almost 70% of today's workforce already relies on mobile messaging. More than half of those companies use BlackBerry devices. Only less than 10% of those companies monitor their BlackBerry infrastructure actively. OpsLogix' intelligent management pack for BlackBerry, supports BlackBerry Enterprise Server 5.0 and can pro-actively help you detect problems in advance.

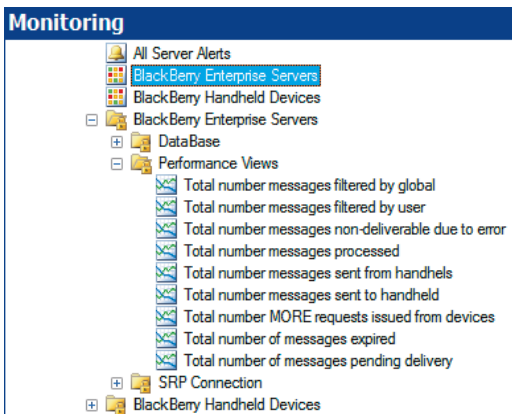

Blackberry Enterprise Server v5.0

In this release we've added **Blackberry Version 5 support**, an extensive class model, a Distributed Application, configurable monitors through overrides, Knowledge for every monitor and reports taking advantage of the new OpsMgr 2007 R2 reporting features. The 18-page guide helps you understand all features and provide a smooth installation.

Root cause analysis

OpsLogix' intelligent management pack for BlackBerry, checks the status of your BlackBerry service as a whole, checking every component. Using System Center Operations Manager's built-in Live Views, it provides the BES administrator insight in the root-cause of the problem.

Performance & State monitoring

OpsLogix' intelligent management pack for BlackBerry, provides comprehensive state views and performance views on your BES infrastructure. Not only does it alert & report you on BlackBerry Enterprise Server issues, it also monitors the most critical component; the SRP connection to RIM.

System Requirements

- System Center Operations Manager 2007 SP1 or higher
- BlackBerry Enterprise Server version 4.1 or higher, or
- BlackBerry Enterprise Server version 5.0
- Opslogix IMP for BlackBerry, Standard or Professional edition
