

“Never miss a heartbeat”

One of the most fundamental monitoring aspects is the network. You rely on it every day, yet there is no easy way to monitor the basics.

OpsLogix is proud to present the Ping management pack, which helps you easily monitor your network attached devices. And the best thing is.. it's FREE.

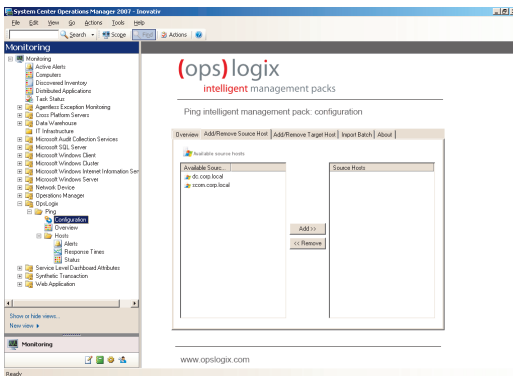

OpsMgr 2007 R2 Compatible

Ping Management Pack

Ping Management Pack

Ever wanted to check the connection to your mainframe? Ever wondered if the WAN link to your office location is experiencing high latency? Don't want to spend \$100 per device for just basic 'ping checks'? Use the OpsLogix' ping management pack to perform these functions for FREE. Download your copy today!

Easy configuration

Don't mess with overrides, files on disk or registry keys. Use our intelligent wizard to configure which hosts or IP address to ping.

Configure which host to ping from. We even provide you with a bulk import wizard so you don't have to add large numbers of pings manually.

Providing knowledge

A management pack is only as good as the knowledge it provides to the Administrator. OpsLogix' ping management pack delivers state views, alerts and performance views.

The object model also provides the ability to use ping targets in Distributed Applications.

System Requirements

- System Center Operations Manager 2007 SP1 or higher
- Opslogix' Ping Management Pack (FREE)
