

OpsLogix and Coretech Global join forces to offer 3 SCOM service packages

Coretech, a Danish company that was founded in 1999, specializes in System Center & Cloud Platform technologies and solutions. Due to this specific focus Coretech has developed a well-known reputation for delivering high quality consultancy and services. With branch offices in Norway, Estonia, Benelux and San Antonio USA, Coretech is able to serve its global customers with locally well-known, highly trained and experienced engineers.

OpsLogix and Coretech share the same philosophy in delivering high end customer centric consultancy. Therefore, we are very pleased to announce that OpsLogix will continue strengthening its relations with Coretech Global.

By teaming up with Coretech Global, we are able to provide 3 service packages:

Full implementation support and fine tuning

OpsLogix MPs are designed to be a one-touch deployment within SCOM. If needed, the OpsLogix support team will do whatever it can to help a SCOM administrator to get the software configured and functioning correctly.

However, in cases where an enterprise or company does not have in-house OpsMgr expertise or simply prefers to have the MP installed, tuned and ready-to-go in their SCOM environment, OpsLogix now offers an outstanding Coretech engineer with years of practical SCOM experience.

SCOM Health Check

OpsLogix is committed to help companies maximize their System Center investment by unleashing SCOM's full monitoring potential. However, reliable monitoring is inherently linked to the quality of the underlying SCOM installation.

In order to insure that a SCOM installation is optimized, we can now supply a first-rate Coretech consultant to do a full SCOM Health Check. The Health Check includes best-practice advice and a document that details methods of potential enhancements both in terms of design and functionality.

SCOM onsite troubleshooting and consultancy

OpsLogix, in combination with Coretech, is able to provide onsite SCOM consultancy expertise including the on-call dispatch of a troubleshooting engineer. This consultancy can be used to support your onsite staff in solving the most complex issues in their environment and provides peace of mind by knowing that you always have the right people by your side to solve any of your SCOM related issues.

OpsLogix is very proud to be able to offer these services in all regions where there are Coretech offices! For more information on these packages please visit www.opslogix.com/coretech or write to us sales@opslogix.com.
